Hazardous Weather

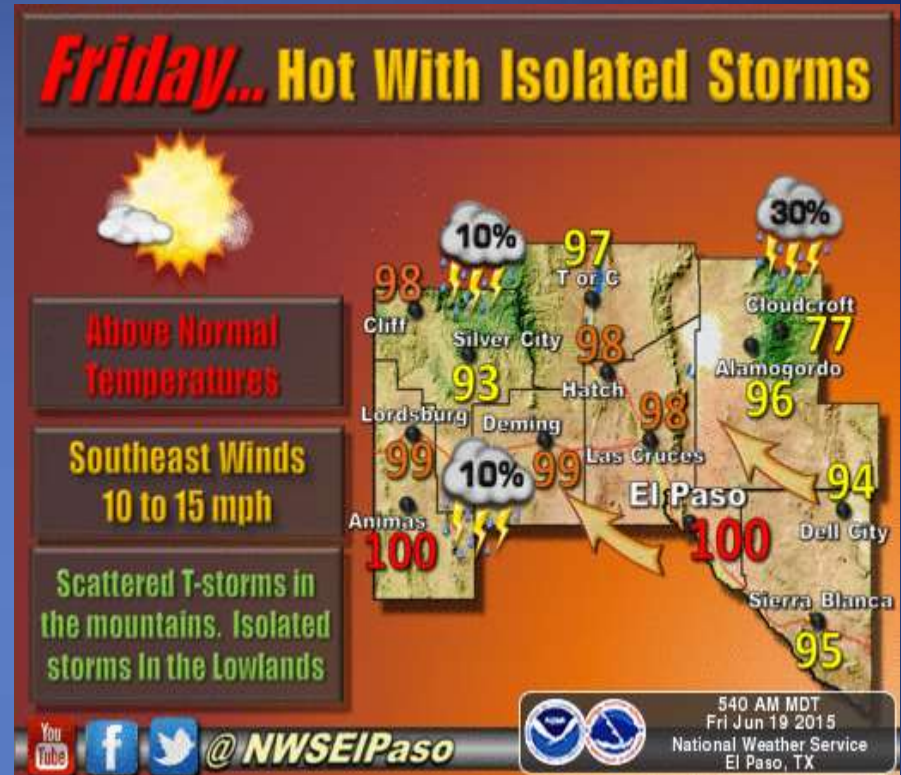

An upper level disturbance draped across Mexico will lead to a chance of showers and thunderstorms across the Rio Grande Plains and Brush Country today through tonight, with lower chances farther east. Although widespread flooding is not anticipated, a few areas may see localized flooding of low lying areas. Otherwise, mostly cloudy skies and warm temperatures can be expected, along with a weak to moderate southeast wind. There is also a moderate rip current risk today along gulf facing beaches.

Hazardous Weather

Some computer models hint at storms developing across northeast New Mexico and possibly making a run towards the region. However, rather weak wind speeds aloft could prevent this from occurring. Furthermore, a few computer models also show the development of isolated storms just about anywhere across the South Plains and Rolling Plains. This might be a bit overdone given an upper level high pressure system being near the area. However if this does occur, can not rule out a few storms approaching strong levels. Otherwise, another warm day is on tap!

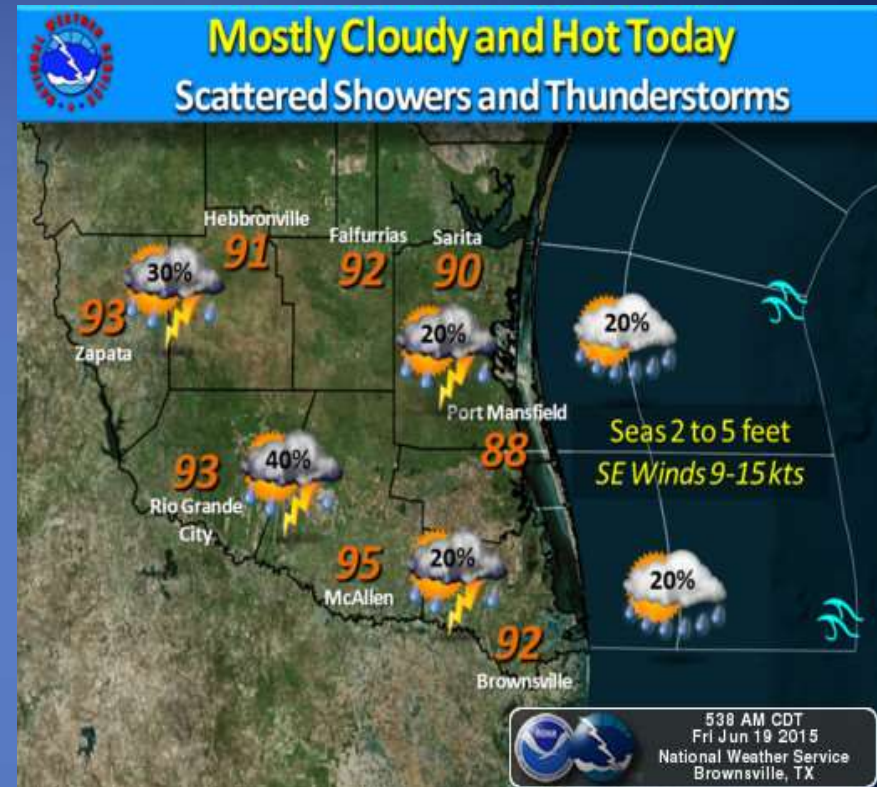

High pressure will build over the area, resulting in mostly sunny conditions and hot temperatures in the afternoon. Temperatures will reach or be near 100 degrees over much of the desert lowlands by the afternoon. Enough moisture will remain to generate a chance of thunderstorms in the mountains with a few isolated thunderstorm possible for the lowlands. Winds will be from the southeast at 10 to 15 mph.

Hazardous Weather

A partly cloudy and warm Friday is in store for North Texas with afternoon highs in the lower and middle 90s. There is a slight chance of thunderstorms across the northern half of the area this afternoon.

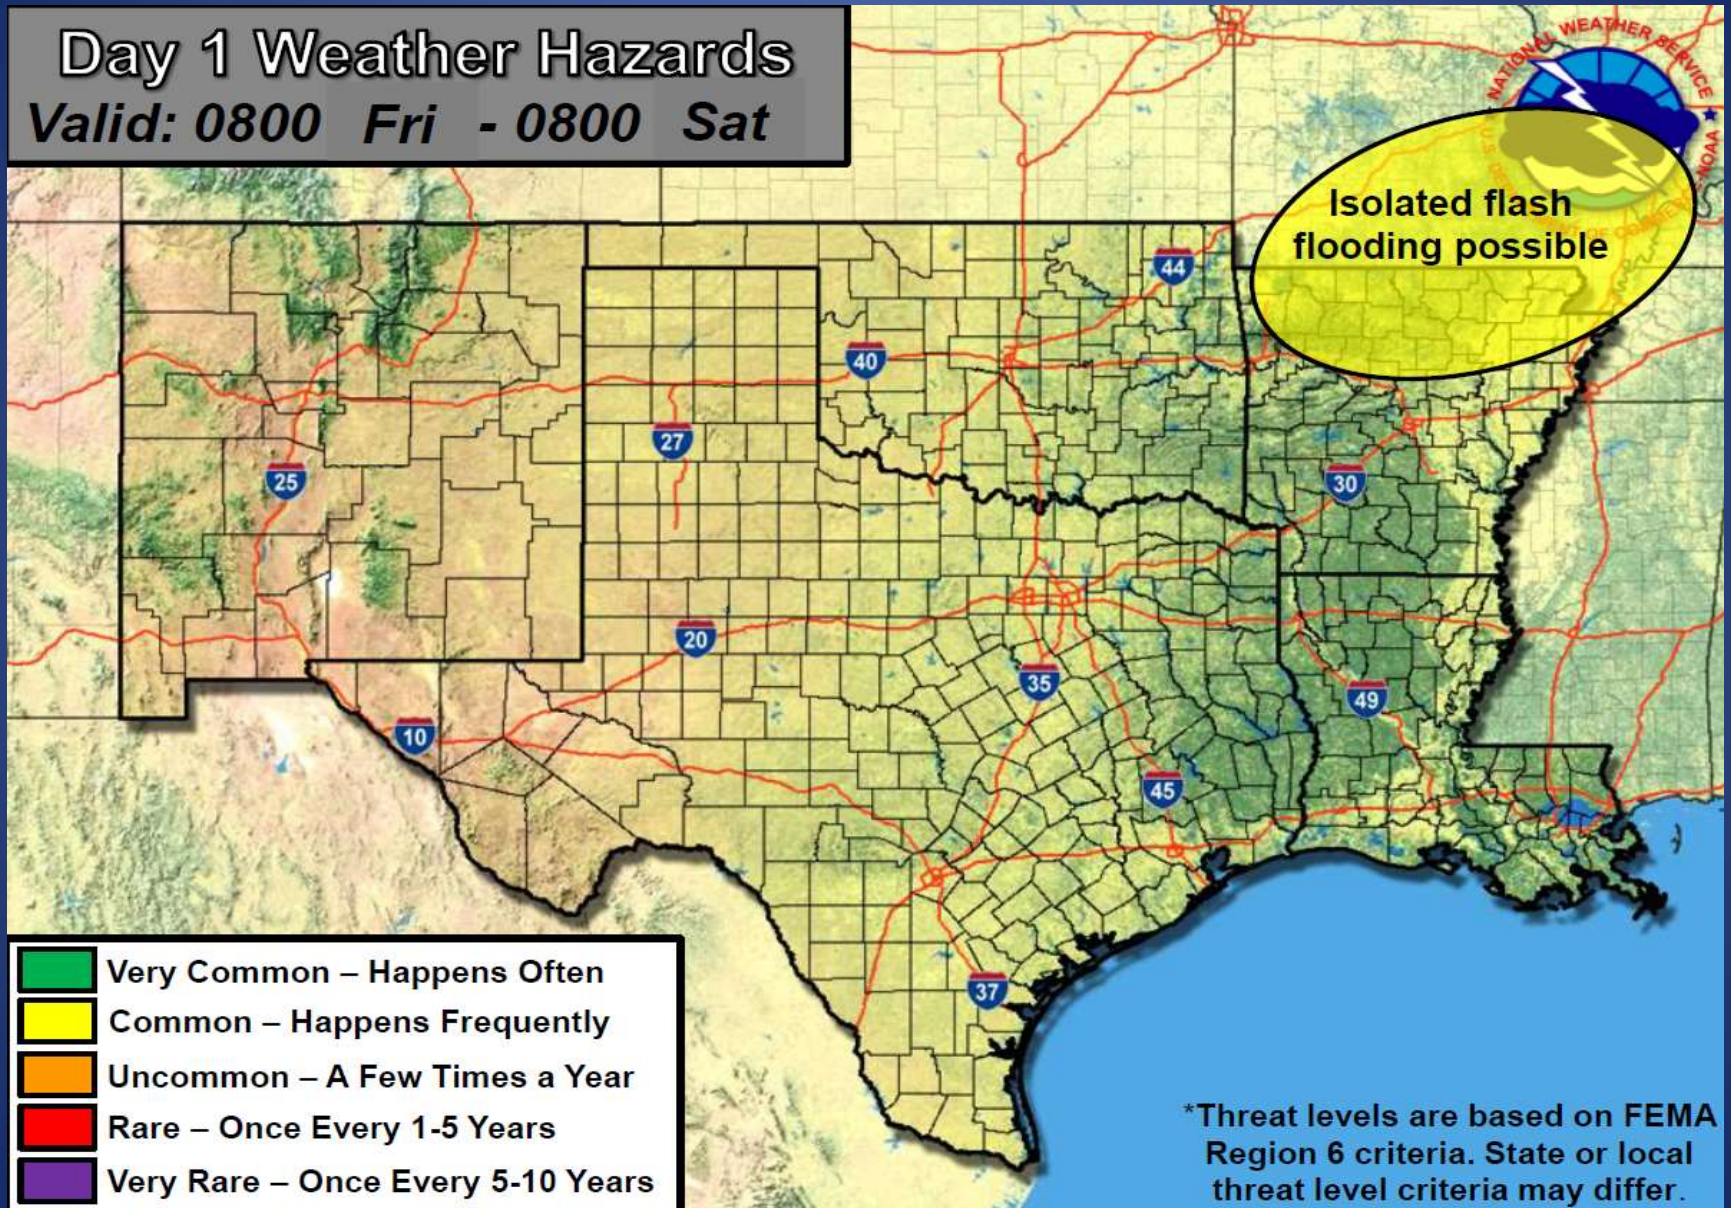

The work week wraps up with continuing rain chances across the Rio Grande Valley and Deep South Texas. Modest moisture, daytime heating, and the sea breeze, will lead to scattered showers and thunderstorms developing later today. Some of the showers and thunderstorms may produce locally heavy rainfall. Temperatures will push into the mid to upper 80s along the immediate coast and into the lower to mid 90s inland. Mostly cloudy skies can be expected along with southeast winds of 10 to 15 mph.

Hazardous Weather

Day 1 Weather Hazards

Valid: 0800 Fri - 0800 Sat

Hazardous Weather

Day 2-3 Weather Hazards

Valid: 0800 Sat - 0800 Mon

No significant impacts
expected

-  Very Common – Happens Often
-  Common – Happens Frequently
-  Uncommon – A Few Times a Year
-  Rare – Once Every 1-5 Years
-  Very Rare – Once Every 5-10 Years

*Threat levels are based on FEMA Region 6 criteria. State or local threat level criteria may differ.
